

A circular inset image showing three white lambs with red ear tags standing in a green field under a blue sky with white clouds. The largest lamb is in the center, looking towards the camera. Two smaller lambs are behind it, one to the left and one to the right.

Ewe-Go

Energy & Calcium Drench for Healthy Ewes

- ◆ Twin lamb disease (*low blood glucose*) and low blood calcium are common problems in ewes before lambing.
- ◆ Distinguishing between the two can be difficult.
- ◆ Ewes suffering from one problem are likely to be affected by the other to some extent.
- ◆ Ewe-Go contains both energy sources and calcium.
- ◆ Energy sources are glycerol and propylene glycol.
- ◆ These are converted to glucose by the ewe meaning all the energy is available to the ewe.
- ◆ Also contains calcium chloride as a source of calcium in the gut.
- ◆ Comes in flexi-packs so any drenching gun can be fitted for easy administration.
